fitfactory ERP

Enterprise Capability.

SME Focused

If you're running the business off spreadsheets and verbal updates, you're always one problem away from a bad week. A job misses deadline. A material doesn't turn up. A customer rings for an update, and suddenly you're chasing answers, rushing purchases, and trying to keep things moving.

Fitfactory ERP is built to stop that. It gives you real-time visibility from sales order through to invoice, with production, purchasing, stock, and job costing all joined up in one place. That means faster order processing with fewer mistakes, less admin, and solutions to current workarounds that quietly cause bigger problems down the line.

It gives you the enterprise-level control most SMEs can't justify paying for, but in a system that's actually practical day-to-day. You get secure access anywhere, fewer production and purchasing surprises, and smoother delivery because you can spot issues early and deal with them properly. And when customers want proof, full compliance and traceability are already built in. As you grow, it scales with you, without piling on complexity.

Faster Order Processing. Cut delays and errors

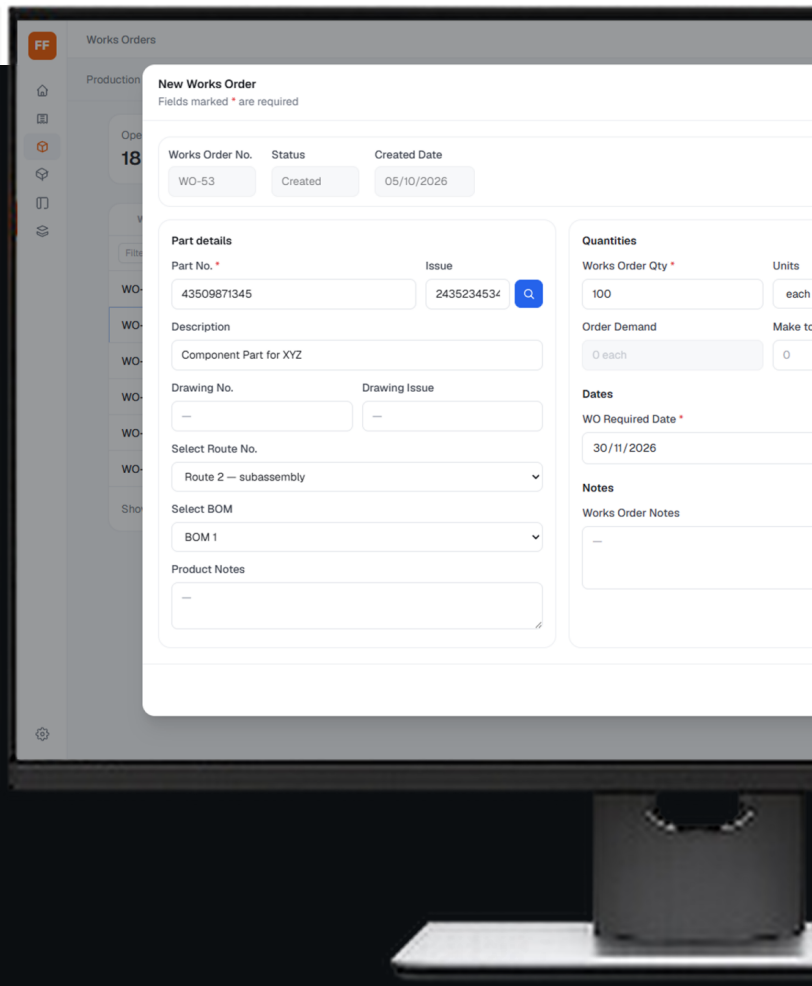

Cut delays and errors caused by double-handling and re-keying. Get orders in cleanly and keep them moving.

Secure Access. Anywhere, Anytime

Check progress, priorities and problems without being tied to the office.

Built-In Compliance and Full Traceability

Track parts, batches and processes properly without digging through paperwork.

Features

Agentic AI at the Core

Reads emails, checks stock and builds quotes and orders for you. Ask any question of your data and get the answer in seconds.

Cloud Native, Use Anywhere

A cloud native, browser-based platform with no client installs, giving seamless, secure access across desktop, tablet, and mobile devices.

Advanced Sales Order Processing

Support for standard, blanket, scheduled, and forecast driven orders, improving accuracy and control across the sales and fulfilment process.

One Connected Manufacturing System

Sales, production, inventory, purchasing, quality and finance managed within a single ERP platform, sharing one joined up data set.

Real Time Dashboards and KPIs

Integrated dashboards with live KPIs and direct click through to underlying data for faster, more informed decision making.

Full Audit and Data Control

Complete audit trails and concurrency control, showing who changed what and when, even in multi user environments.

End to End Traceability

Full product, batch, and serial number traceability across the entire lifecycle, supporting demanding customer and compliance requirements.

Controlled Production

Version controlled bills of materials, routes, and works orders ensure production always runs to the correct specification.

Quality and Approvals

Integrated approvals, quarantine handling, and quality workflows embedded directly into day to day operations.
