insights

Business intelligence software

Know exactly how your business is performing.

Insights pulls all your data into one place and shows you what is actually happening in your business, in plain language, without the legwork.

It connects automatically to your existing systems in real time and turns your numbers into clear charts and graphs. So instead of digging through spreadsheets, you can see exactly where things stand and where the problems are.

Put your KPIs up on screens in your meetings or out on the shopfloor and they update as the day runs. Your team can see the same picture and act on it without waiting for a report to land in their inbox.

Share live dashboards and reports with your customers and suppliers so they can see progress for themselves and get updates without having to chase you.

Make sure the right people always have the information they need to make good decisions, without having to ask for it.

Act on what the data shows

Automate customer communications

A signifcant game-changer for customer service

"Developing and implementing the KPI Dashboards have been a significant game-changer in what we can offer new and existing customers and also how we conduct our regular Sales & Operation's Review using real-time data."

- A & G Metal Treatments Ltd.

Insights that drive productivity

All your data sources, one dashboard

Pull in data from your ERP or MRP system, spreadsheets, standalone databases and cloud tools, all into one place. Set up your dashboard by team or department so each part of the business sees what matters most to them, without having to wade through everything else.

Always up to date

Your dashboard refreshes on its own as new data comes in, so you are always looking at what is happening now rather than what happened last week. When you need to update your team or a customer, share a report by email or as a PDF in a couple of clicks.

Show your data the way that makes sense

Choose from a wide range of chart and graph formats so your data is presented in a way that actually means something to the people reading it. Set up each chart to suit your needs and adjust it whenever you like.

Ready-made reports to start with

Not sure where to begin? Browse the reports library and pick a pre-built template that covers what you need. If nothing fits quite right, adapt an existing report or build your own from scratch. Either way, you can have something useful up and running in minutes without needing any technical know-how or outside help.

Quick to get going

Insights connects to most systems in a matter of minutes using a straightforward setup process. Once it is in, the interface is clear and simple enough that your team can find what they need without any hand-holding or lengthy training.

Drill down into the numbers

See something you were not expecting in the numbers? Tap through and drill into the detail behind any chart to find out exactly what drove it. Understand what went right in a good month and work out how to make it happen again.

Available wherever you are

Insights runs in a secure data centre, so it does not matter whether you are in the office, walking the shopfloor or away on business. Log in from any device and you will see an up to date picture of how your business is performing.

Improve & grow

Share the right information quickly so your team can make improvements without waiting. See the trends in your data before they become problems and use what you learn to plan ahead and keep things moving in the right direction.
