fitfactory MES

Plan. Manage. Monitor.

In a Single App

Fitfactory MES gives you a clear view of everything happening on your shop floor, which jobs are running, where the hold-ups are, and how your machines are performing. Take it as a full system or start with just the module you need most.

Stop chasing progress updates and start managing from the facts. Fitfactory tracks jobs in real time, keeps your compliance records in order, and helps you get more out of the machines and people you already have. It works on mobile, desktop, and tablet, and connects to the systems you already use.

Accessible across desktop, tablet, and mobile devices.

Open API for easy integration

Real-time monitoring of production processes.

Mobile Optimised Production

Features

Full mobile visibility

Machine Monitoring, Production Scheduling, and Shop Floor Data Capture all in one app. Check in from the office, the floor, or the car park.

Easily Accessible

Works on Windows, iOS, and Android. Your team can use it on whatever device they already have in their hands.

Open API

Connects to your existing ERP or MRP software. Works with what you have already got, no ripping and replacing.

Machine Reporting

Know which machines are running and which are not, in real time. No more walking the floor to find out what is happening.

Traceable History

A full record of machine and job history you can actually use. Spot recurring problems before they cost you a delivery or a customer.

Advanced Scheduling

Builds your production schedule around what you actually have available, machines, people, and time. Fewer surprises, better

Identify Weaknesses

See clearly where jobs are getting stuck and why. Deal with the real problem, not the symptom.

Built-in Analytics

Track non-productive time alongside machine uptime to see exactly where hours are being lost and what it is costing you.

Shop Floor Statistics

Live dashboards that show what is actually happening on the floor right now. The kind of visibility that means you can manage the business, not just react to it.
