Dashboard

for tricorn

User dashboard

The Dashboard shows you exactly what's going on across your business the moment you open it. No digging through reports, no chasing people for updates. The right information, in front of the right person, straight away. Each person in your team sees what's relevant to their job. Your production manager sees jobs, your quality team sees NCRs, your accounts team sees the numbers. Everyone stays on top of their area without bothering you for it.

Role based dashboard

Full visibility of business

Daily task lists

Perfect for every role in your business

Production

See straight away which jobs are running late, where operations have overrun, and any scrap alerts from the shop floor.

Purchasing

Chase lists for outstanding purchase orders, spend history, and an instant view of materials falling below minimum stock.

Sales

Quotes that need following up, sales history, and conversion rates, all in one view.

Quality

On-time delivery performance, stock in quarantine, and key quality KPIs, visible at a glance.

Accounts

Stock valuations, expected deliveries, and financial data, all visible without running a single report.

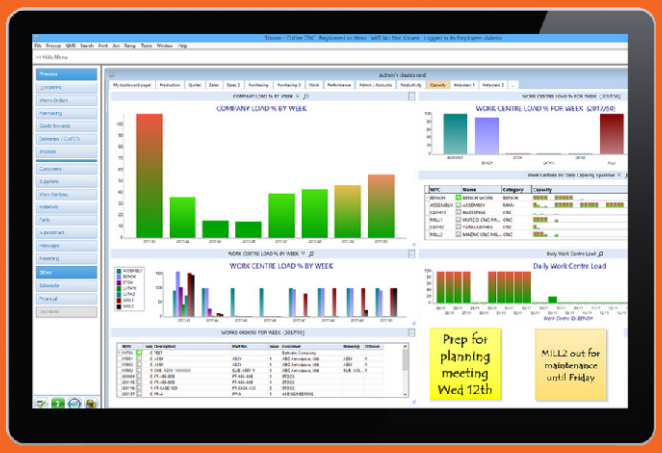

Build your own dashboard by choosing from ready-made widgets. No IT help needed, no configuration project. Pick what you need and go.

Analyse & improve collaboration

Sensitive information stays with the right people. Financial data doesn't need to be visible to the shop floor, and shop floor data doesn't need to flood the accounts team. Each person sees what they need to do their job properly. Widgets are easy to customise without calling in IT. Change chart types, adjust date ranges, add filters. If something catches your eye, click straight through to the detail, whether that's a purchase order, a job, or a delivery.

When the system starts up, your team's to-do list is already waiting for them. No running reports, no asking around. The right alerts land in front of the right person, straight away. Put a dedicated display on the workshop wall or in the office. Live data, no login, visible to everyone who needs it. Your team always knows where things stand without having to ask.

"A great visual overview and complex reports at the click of a button"

"Tricorn's dashboard gives us a great visual overview and complex reports at the click of a button. Never before have we had such a clear, easy to understand view of the data accumulated in Tricorn, beautifully presented in graphs and charts that are simple to export and share with the team."

- Pete Wood, Director, JWA Tooling

Give your team the information they need, when they need it

When production data and financial data live in different places, you end up with two versions of the truth and time wasted reconciling them. The Dashboard pulls everything into one view so you're always looking at the same numbers, whether you're on the shop floor or in the office. Export reports and share them directly with customers or suppliers to resolve a query fast. No back and forth, no waiting for someone to pull the data.

Need to keep an eye on which suppliers are performing and which aren't? Build a single supplier performance dashboard with the KPIs that matter to you, then filter down to a single supplier in seconds when you need the detail. It's the kind of visibility that used to take a full-time person to maintain. Now it's there every morning before you've had your first coffee.
