fitfactory

tricorn intelligence

AI POWERED

Instant answers from your factory.

Tricorn Intelligence is an AI connector for your Tricorn system. It gives you a simple way to ask questions across your live data in plain English, and get clear figures, tables and charts back in seconds.

Check production progress, job status, stock levels, material availability, orderbooks, purchasing, costs and more. Or create reports and charts without needing SQL, exports or a report writer. If it exists in your system, Intelligence has the answer.

It is read only by design. Nothing is written back to Tricorn, nothing is changed, and every answer comes from your own live data.

Ask in plain English

No report writer, no SQL, no exporting to spreadsheets.

Answers you can trust

Every figure is checked against live data before it reaches you.

Read only by design

It reads your Tricorn data. It never changes it.

Built for Tricorn

An AI connector for the Tricorn system you already run.

LIVE FROM YOUR TRICORN DATA

? “Which completed jobs last month came in over cost?”

11 of 64 jobs

over planned cost, £18,420 total variance

Checked against live data. SQL available on request.

Ask a question. Get an instant answer.

Always read only

The AI connector can read your Tricorn data. It cannot change anything in it.

Your data stays yours

Your figures stay in your conversation and are not used for anything else.

Every figure is real

Answers come from your live data and are checked before they are shown.

Reports that answer the questions you actually ask

Five reports are ready from day one, built around what manufacturers ask most. Anything beyond that, just ask Intelligence.

Orderbook Overview

Every open order, where each operation has got to, purchase status and delivery adherence. See what is overdue, what is due this week and what is on track.

Quote Analysis

How many quotes went out, how many became work orders, the value won and the conversion rate. Useful for spotting where enquiries are being lost.

Job Profitability

Completed jobs with planned cost against actual, and the variance highlighted. Find out which jobs made money and which quietly did not.

Purchasing Spend

Spend split by material, subcontract, parts, tooling and other, with the largest items flagged. A clear view of where the money goes.

Billings Value

Invoiced value by period, net of credit notes and excluding carriage. The figure you need for a month end conversation, without building it by hand.

Anything else, just ask

Production progress, stock levels, material availability, month end packs and one off charts. If it is in Tricorn, ask for it.

From a plain English question to an instant answer

1

Ask a normal question

Type it the way you would say it. Tricorn Intelligence works out what you need and pulls it from your live data. The SQL is there if you want it.

2

A secure AI connector

The connector links Intelligence to your Tricorn system, matched to your company and financial year. It reads your data and never writes back.

3

Checked before you see it

Integrity checks catch anomalies, correct the query and flag missing data, rather than handing you a wrong number.
