# tricorn

## Production control software

## Simple MRP production control for SME manufacturers

Tricorn helps you manage the full job cycle, from quote to invoice, without the headaches. You get visibility on quality, costs, and delivery without chasing updates across the shop floor.

Tricorn covers the full cycle: quoting, stock control, production, purchasing, invoicing, and supplier management. Take the modules you need, add more when you're ready.

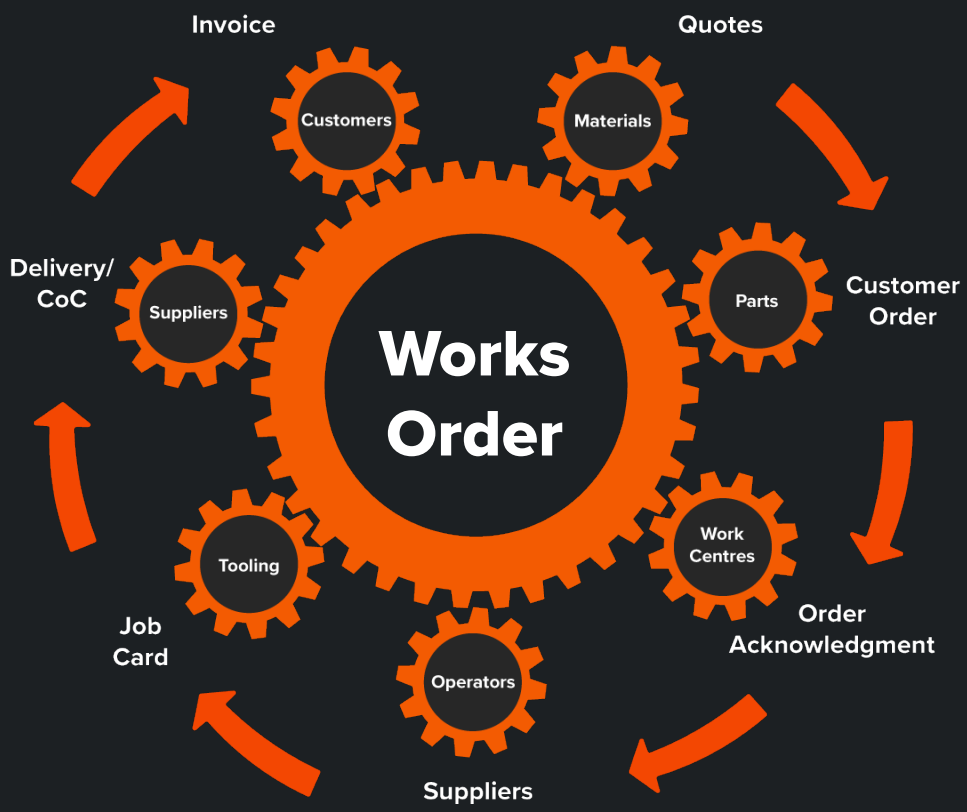

Built-in reporting shows you what's actually happening, where the hold-ups are, and which jobs are making you money. No guesswork.

Rapid deployment: go live in days, not weeks or months

Advanced dashboard & reporting

*"Tricorn enabled us to increase our turnover by 50%"*

"Tricorn has made us quicker and more efficient and I am really impressed with the traceability of all the data. It has helped us to grow - we could never have increased our turnover by 50% since the system was installed without the help of Tricorn. I should have done it sooner!"

- Loftlock Precision Engineering Ltd

# Features

### Estimating & quoting

Build up detailed job costs including materials, parts, and sub-components. Set mark-up percentages for each stage of the build so you can see exactly what to quote.

Quotes can cover single items, multiple items or quantities, assemblies, or kits of parts in any combination.

### Stock control

Record raw materials and components with costs, specifications, locations, quantities in stock, and quarantined items.

Print stock lists with valuations showing parts in stock and all associated information including works orders and traceability.

### Production

Create works orders from successful quotes, previous works orders, or parts templates. Print job cards with key information to your specification.

Manage multiple delivery batches and stock. Record time via barcode scanners, touchscreens, or direct input.

### Purchase orders

Raise POs for works orders or stock purchases. Record deliveries against purchase orders with full material traceability.

Attach certificates of conformity to materials booked in or sub-contract items returned after treatment.

### Invoicing

Produce invoices from delivered batches without re-entering information.

Create invoices individually or in bulk, and send them directly to customers from within the system.

### Request for quotation

Send RFQs to multiple suppliers for materials, parts, and subcontract activities.

Save responses for future use and raise a purchase order directly from the selected RFQ response.

### Security & access control

Each user has their own userID and password to access the system.

Viewing and document creation rights are held in the user database and can only be changed by the system administrator.
